EXECUTIVE SUMMARY

Analytical and results-driven Computer Science undergraduate specializing in Data Analytics and Full-Stack Software Development. Practical experience utilizing Python, SQL, and Power BI for data pipeline architecture, statistical modeling, and relational database queries. Proven ability in translating complex multi-variate datasets into interactive dashboards and developing robust, maintainable software applications.

TECHNICAL EXPERTISE

Programming Languages: Python, Java, C#, C++, SQL, HTML5, CSS3, JavaScript (Core)
Analytics & BI Tools: Microsoft Power BI, DAX, Advanced Excel (Power Query, Pivot Tables, VLOOKUP), EDA
Libraries & Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn (Fundamentals)
Database Systems: MySQL, Relational Database Management Systems (RDBMS), SQL Query Optimization
Core Competencies: Statistical Analysis, Data Visualization, Object-Oriented Programming (OOP), Data Structures

PROFESSIONAL EXPERIENCE

Softspara — Software & Data Analyst Intern *Ongoing | Sangli, Maharashtra*

- Data Transformation & ETL: Clean, normalize, and manipulate enterprise datasets utilizing Python and SQL, reducing data processing errors across regular operational cycles.
- Software Engineering: Assist engineering teams with code development, bug fixing, and module testing using structured programming paradigms.
- Reporting & Insights: Generate periodic analytical summaries and query-driven reports to facilitate data-informed operational decision-making.
- Cross-Functional Collaboration: Actively engage in sprint discussions, requirement analysis, and documentation to deliver software updates on schedule.

KEY PROJECTS

Cyber Crime Analytics System — Python, Pandas, Matplotlib, SQL *Technical Project*

- Engineered an exploratory data analysis (EDA) pipeline processing extensive cyber incident records to evaluate threat distribution and vector frequency.
- Built comprehensive visual dashboards in Python and Power BI, successfully pinpointing seasonal peaks and key vulnerability sectors.
- Formulated actionable, data-backed preventive strategy models to assist in risk mitigation and pattern recognition.

Statistical Crime Trend & Pattern Modeler — Python, Advanced Excel, Statistics *Technical Project*

- Conducted rigorous multi-variable statistical analysis on historical crime records (homicide datasets) to detect long-term longitudinal trends.
- Applied statistical hypothesis testing, frequency distributions, and regression indicators to establish correlation between demographics and incident rates.
- Developed clean, high-impact comparative visual reports delivering high-level insights for non-technical stakeholders.

Hospital Billing & Record Management System — C++, File Handling *Academic Project*

- Architected an interactive console-based system with CRUD operations for automated billing, patient records, and receipt generation.
- Structured object-oriented architectures to ensure modularity, memory efficiency, and accurate numerical billing calculations.

EDUCATION

Bachelor of Computer Science (BCS) *Expected 2027*
Willingdon College, Sangli • Shivaji University, Kolhapur
